**IMPORTANT.** Release projector housing prior to installation

**Prior to Installation**

- Place lift on shipping box, then connect power and lower using remote control.
- Remove four retaining screws, located on either side of the projector housing.
- Separate the lift mechanism from the projector housing.
**STEP 1. Find Joists, Pipes & Cables**

Find the approximate position for your projector and then locate and mark the position of any joists, wiring and plumbing.

To aid installation a wood/metal sensor is recommended. Available from most DIY stores.

**STEP 2. Mark Out Position**

Now you have the joists marked, measure the exact position for the projector lift and mark out using the template supplied. Simply draw around the **INSIDE** of the template and then mark all hole positions.

(We recommend holding the projector in place, powering up and testing the screen size with zoom set to its middle position before drilling holes.)

**STEP 3. Drill Holes**

Drill 8mm diameter holes through ceiling for mounting screws. Be sure to drill the holes carefully as these will have to line up with the projector lift.

**STEP 4. Cut Slot**

Cut out ceiling slot along the template line, taking care to keep as close to the line as possible.
STEP 5. **Install Template**

Place the template into the ceiling cavity and align with holes.

If you are securing directly to joists cut the template to suit and secure using No.8 screws into joists.

STEP 6. **Install Transformer**

Place the mains transformer into the ceiling cavity and connect to the nearest suitable mains power supply. Allow the 24v plug to hang down for easy connection to the lift.

STEP 7. **Install Projector Lift**

Raise the lift up to the ceiling and connect the power supply.

*Note. The LEDs on the lift should both light RED, then go to GREEN and YELLOW, and then OFF.*

STEP 8. **Test Lift Mechanism**

Test mechanism up and down with remote control then leave in the down position to allow projector housing to be mounted.
**STEP 9. Install Power & AV Cable**

Install the projector power and AV cables and leave hanging down approximately 300mm. This will aid installation of your projector.

**STEP 10. Mount Projector**

Mount projector to projector tray where inverted mounting is required. Otherwise place projector onto projector housing and place tray above. Then raise up to ceiling and connect all power and AV cables to the projector.

**STEP 11. Install Projector Lift**

Once power and AV cables are connected lift the projector housing up into the lift mechanism and fit four retaining screws, two on either side. This will secure the projector housing to the lift mechanism.

**STEP 12. Secure And Test**

Finally tighten all screws into ceiling.

*(Fit screw covers once you have tested your installation.)*

*Your lift is now ready to use.*

Please read the following pages for operating instructions and programming options.
Once your lift is correctly installed and power has been established simply use the supplied remote control to operate the lift.
The projector lift can learn commands from the majority of domestic remote controls, allowing your TV or projector remote to control the lift.

Programming a new remote will NOT disable the PureTheatre™ IR Remote.

PROGRAMMING IR REMOTE CONTROL:

**STEP 1.** Press programming button until SYSTEM STATUS LED & IR STATUS LED illuminate. *(Approx 2 sec)*

**STEP 2.** Then only SYSTEM LED illuminates. *(Watch LEDs when programming as IR is very fast.)*

**STEP 3.** Press desired UP button briefly on the domestic remote control.
The *IR LED* flashes *GREEN* for learning then *RED* for storing the new button.

**STEP 4.** Press UP button again briefly on domestic remote control.
The *IR LED* flashes *GREEN* for learning then *RED* for storing the new button.

**STEP 5.** Now press desired STOP button briefly on the domestic remote control.
The *IR LED* flashes *GREEN* for learning then *RED* for storing the new button.

**STEP 6.** Press STOP button again briefly on domestic remote control.
The *IR LED* flashes *GREEN* for learning then *RED* for storing the new button.

**STEP 7.** Now press desired DOWN button briefly on the domestic remote control.
The *IR LED* flashes *GREEN* for learning then *RED* for storing the new button.

**STEP 7.** Press DOWN button again briefly on domestic remote control.
The *IR LED* flashes to confirm success then extinguishes.

**NOTE.** When LEDs go out your domestic IR remote control is ready to use.
FACTOR Y RESET

A factory reset will remove all stored IR commands and return the lift back to factory default.

PERFORMING FACTORY RESET:

STEP 1. Press PROGRAMMING button for 20 seconds until

SYSTEM STATUS LED & IR STATUS LED illuminate RED.

STEP 2. Release PROGRAMMING button.

SYSTEM STATUS LED & IR STATUS LED will flash RED 3 times.

STEP 3. The screen will then RESTART.

The factory reset is now complete.
